

Integrated Research in Science and Technology

The rapid advancement in the field of science and technology has wide ramifications for future innovations and development in different fields. This book aims to integrate concepts and applications from different fields of science and engineering. The significant topics discussed herein are related to different disciplines like computer simulation and modeling, manufacturing engineering, materials science, industrial management, computer engineering, etc. The case studies and researches compiled in this book are bound to provide innovative insights into the significant applications of these fields. Students and academicians from various interdisciplinary fields will find it an invaluable source of reference.
