

Automotive Maintenance & Light Repair

AUTOMOTIVE MAINTENANCE AND LIGHT REPAIR (AM&LR) was designed to meet the needs of automotive programs that teach to the competencies specified in NATEF's Maintenance & Light Repair (MLR) program standard. Designed for entry-level students, the primary features of AM&LR are the focus on the foundational principles and knowledge for the MLR tasks, and the activities to supplement student learning. Both the core textbook and accompanying workbook provide activities covering the entire MLR task list, as well as many supplemental tasks often expected of entry-level technicians. In addition, Automotive Maintenance and Light Repair is written to engage students not just in automotive competencies, but also in applied academic skills and lifelong learning skills, including math, science, and communication.
