The various parts of the code for this task are explored and you will learn to alter them to suit your needs. The next part of this book explores how to create a view, thus, you will learn how to create a view and then integrate it with the controller of your app. Passage of data between the two is discussed. Models are also discussed without a single detail left out. You will learn how to create a model and then integrate it with the rest of the layers for the purpose of communication. You will learn how to work with a database, including inserting data into the database and retrieving data from it. Validation of forms in ASP.NET MVC 5 has also been discussed.
