

ASP.NET Web API and Angular 2

Key Features Learn how to design Single Page Applications (SPAs) with the latest versions of the popular frameworks Angular 2 and ASP.NET Web API. An explicit focus on understanding how the two tools fit together gives this book a unique insight on how to make SPAs for you and your clients that just work. This book covers all the major topics you need to create SPAs with ASP.NET Web API and Angular 2: routing, creating clean URLs, handling data (OData), and authentication.

Book Description For most developers, writing code is a balance between maintainability and productivity: how quickly can you write it versus how much more you have to write in the future. Writing APIs goes some way to striking a balance, as you can have an API that feeds data from your back-end to front-end service for consumption. Now, this front-end can change to a mobile app, a website, desktop app, but what you do at the back doesn't change and remains ASP.NET Web API. This book focuses on blending and connecting ASP.NET Web API and AngularJS. We'll guide you through building a fully-featured, potentially shippable SPA project with all its core aspects in place: readable URIs, OData retrieval, authentication patterns, RESTful interfaces, and more. By the end of the book, you will be able to make impressive SPAs using ASP.NET Web API and Angular 2. This book focuses about blending/connecting together the two topic technologies: ASP.NET WebAPI and AngularJS. The book aims to be a guide to the readers throughout by building a fully-featured, potentially shippable SPA project with all its core aspects in place: readable URIs, OData retrieval, authentication patterns, RESTful interfaces and more. What you will learn: Get to know the MVC 6 core aspects such as Model and Web API Controller. Gain the required resources and configure the MVC 6

interfaceSee how to client-route requestsSet-up the data model using entity frameworkExtend the client controllersSecure your application against various security threatsAbout the AuthorValerio De Sanctis is an experienced IT professional with more than 12 years of experience in lead programming, web-based development, and project management using ASP.NET, PHP, and Java. He held senior positions at a range of companies, most recently serving as Chief Technology Officer and Chief Operating Officer at a leading after-sales and IT service provider for many top-tier life and non-life insurance groups. He also runs an IT-oriented, web-focused blog at www.ryadel.com featuring news, reviews, and guides to help developers and enthusiasts worldwide.
