

E-Logistics and E-Supply Chain Management: Applications for Evolving Business

Business models rely on the development and use of technologies in logistics and supply chain management in order to continually improve business processes. E-Logistics and E-Supply Chain Management: Applications for Evolving Business explores the creation of integrated supply chains, the developments of virtual business, and the processes of re-engineering for business development. This reference source is useful for researchers, students, and practitioners to provide an academic and pragmatic approach to electronic logistics and supply chain management.
