

ISO 10816-6:1995, Mechanical vibration - Evaluation of machine vibration by measurements on non-rotating parts - Part 6: Reciprocating machines with power ratings above 100 kW

Specifies the general conditions and procedures for the measurement and evaluation of vibration, using measurements made on the non-rotating parts of machines with power ratings above 100 kW. Typical examples of application are marine propulsion engines, engines in diesel generator sets, gas compressors and engines for diesel locomotives. Does not apply to machines installed in road vehicles. This title may contain less than 24 pages of technical content.
