

## GO! with Microsoft Excel 2007, Volume 1

The primary goal of the GO! Series, aside from teaching computer applications, is ease of implementation, with an approach that is based on clearly-defined projects for students and a one of a kind supplements package. GO!'s project-based approach clusters the learning objectives around the projects rather than around software features. Teaches students to solve real problems as they practice and learn the features. This edition contains a CD-ROM. GO! with Microsoft Excel 2007, Volume 1, 1/e covers the following topics: creating a worksheet and charting data; managing workbooks, using functions and tables; using templates, range names, and lookup functions; importing and summarizing data with database tools, pivot tables and conditional summary formulas. Ideal for students and individuals seeking a project-based introduction to Microsoft Excel 2007.
