

IEC 60300-3-11 Ed. 1.0 b:1999, Dependability management - Part 3-11: Application guide - Reliability centred maintenance

Provides guidelines for the development of an initial preventive maintenance programme for equipment and structures using reliability centred maintenance (RCM) analysis techniques. RCM analysis can be applied to items such as ground vehicle, ship, power station, aircraft, etc, which are made up of equipment and structure, e.g. a building, airframe or ships hull. Typically an equipment comprises a number of electrical, mechanical, instrumentation or control systems and subsystems which can be further broken down into progressively smaller groupings, as required.
