

Internet & World Wide Web How to Program (3rd Edition) (How to Program (Deitel))

The goal of Deitel & Associates, Inc.s Internet & World Wide Web How to Program, 3/e is to introduce readers with little or no programming experience to the exciting world of Web-based applications. This comprehensive book with accompanying CD-ROM teaches the fundamentals needed to program on the Internet. Readers will be well-prepared to build real-world, industrial-strength, Web-based applications. In-depth coverage of introductory programming principles, various markup languages (XHTML, Dynamic HTML and XML), several scripting languages (JavaScript, VBScript, Perl, Python, PHP, ColdFusion, and FlashActionScript), Web servers (IIS and Apache), and relational databases (MySQL) provide all the skills and tools needed to create dynamic Web-based applications. This new edition contains chapters on Macromedia ColdFusion, a leading server-side scripting software package, and Macromedia Dreamweaver, a powerful WYSIWYG editor and Web application creation tool. Hundreds of LIVE-CODE examples (i.e., complete, working programs) of real applications throughout the book and on the accompanying CD allow readers to run the applications and see and hear the outputs. Readers learn to incorporate multimedia into Web pages and Web-based applications to enhance their presentations. Chapters on e-Business and Accessibility for people with disabilities expose readers to a wide range of other topics. For Internet and Web-based computer programmers, and others in organizations and businesses who need to develop their own Websites and pages.
