

# ISO 10705-1:1995, Water quality -- Detection and enumeration of bacteriophages -- Part 1: Enumeration of F-specific RNA bacteriophages

Specifies a method for the detection and enumeration of F-specific ribonucleic acid bacteriophages. The sample is incubated with an appropriate host strain. Applicable to all kinds of water, sediments and sludges, even for shellfish extracts. The presence of F-specific RNA bacteriophages in a water sample indicates pollution by wastewater contaminated by human or animal faeces. This title may contain less than 24 pages of technical content.
