

ISO 4794:1982, Laboratory glassware -- Methods for assessing the chemical resistance of enamels used for colour coding and colour marking

Test methods for determining the service performance of enamels are specified, i.e. for determining whether an enamel resists the specified treatment. The procedure involve treatment for specified periods with an alkine detergent at 80 degrees centigrade and a dilute acid solution at room temperature. This title may contain less than 24 pages of technical content.
