

Java Programming with Corba

Nearly 30,000 java developers relied on the first two editions of java programming with corba to learn how to build large-scale applications with corba components. These same developers now have more reason than ever to embrace the third edition. That's because the latest release of java, java 2e enterprise edition, fully supports component development with both corba and enterprise javabeans (ejb). Developers need to know how to use both corba and ejb to get the most from their java applications. This how-to book provides in-depth coding examples not just snippets of code and tackles advanced programming issues that enterprise developers face every day.
