

Computer Applications in Applied Polymer Science II: Automation, Modeling, and Simulation (ACS Symposium Series)

Addresses the impact of computer science on automation, modeling, simulation, and optimization of polymer science as a result of the availability of more powerful, lower-cost computers and modeling software. Five sections illustrate a wide variety of modeling applications, including laboratory and information automation; mathematical modeling, simulation, and optimization; cross-linking reactions and cure process modeling; polymerization kinetics and process modeling; and polymerization process control.
