

Chemistry & Technology for UV & EB Formulation for Coatings, Inks & Paints, Vol. V, Speciality Finishes

This series seeks to publish practical, applications orientated books designed for professional chemists employed in the paints and coatings industry, and reflecting technological developments, environmental concerns and increasing demand for higher volume production in emerging markets. The books in the series should provide insights into industrial methods which have traditionally been trade secrets. The volumes in this series provide information covering markets, substrates, processes, curing equipment, materials and world suppliers. This is combined with an in-depth treatment of the chemistry that is essential to the development of an understanding of the technology.
