

Mining in the Himalayas: An Integrated Strategy

Himalaya, the worlds most prominent mountain system of the world is a source of sustenance for the social, cultural and economic development of population across different countries. Unscientific, small-scale mining for harnessing reournces including minerals has caused ecosystem damage. Therefore, an integrated and holistic approach to deal with the resource management is required. This book makes a focussed effort to explain how mining in the Himalaya is practiced with discussions pertaining to critiques and lacunas of mining and environmental practices. Status of mining practices in Himalaya is included along with the legal/environmental repercussions of mining.
