

New Results in Numerical and Experimental Fluid Mechanics IV: Contributions to the 13th STAB/DGLR Symposium Munich, Germany 2002 (Notes on Numerical ... and Multidisciplinary Design) (v. 4)

This volume contains the paper presented at the 13th DGLRIST AB Symposium held at the Technische Universität München, November 12 to 14, 2002. STAB is the German Aerospace Aerodynamics Association, founded towards the end of the 70s, whereas DGLR is the German Society for Aeronautics and Astronautics (Deutsche Gesellschaft für Luft- und Raumfahrt - Lilienthal Oberth e.V.). The mission of STAB is to foster development and acceptance of the discipline Aerodynamics in Germany. One of its general guidelines is to concentrate resources and know-how in the involved institutions and to avoid duplication in research work as much as possible. Nowadays, this is more necessary than ever. The experience made in the past makes it easier now, to obtain new knowledge for solving today's and tomorrow's problems. STAB unites German scientists and engineers from universities, research establishments and industry doing research and project work in numerical and experimental fluid mechanics and aerodynamics for aerospace and other applications. This has always been the basis of numerous common research activities sponsored by different funding agencies.
