

Newnes Radio Engineers Factfinder for Windows (Newnes Pocket Books)

All aspects of radio and communications engineering are covered in this easily accessible Windows based product. Based on the highly successful Newnes Pocket Book, each topic is presented in screen-sized chunks, with tables of data, definitions and diagrams available as point and click pop-ups. The Factfinder is easy to use and can be searched by keyword, chapter heading, or by pages sequentially, or even compiled into user-defined folders. Wave principles and the decibel scale, instrumentation and power supplies, equipment types and encryption methods, connectors and interfaces, are all included on this disk. Each of the Factfinders builds up into a coherent data library, and the user has the option of searching for a topic or item of data across all the Factfinders they have purchased. This is the first technical electronic library providing access to a wealth of information published by the leading source of engineering information, Newnes. Eventually this series will build into a complete electronic database that is easy to use, bolts onto a basic PC, and provides convenient, cheap, low memory access to engineering data.

Essential reference tool for engineers
Windows based with a key word search facility
Master search facility across range of titles
