

# Partial Evaluation. Practice and Theory: DIKU 1998 International Summer School, Copenhagen, Denmark, June 29 - July 10, 1998 (Lecture Notes in ... / Lecture Notes in Artificial Intelligence)

As the complexity of software increases, researchers and practitioners continue to seek better techniques for engineering the construction of evolution of software. Partial evaluation is an attractive technology for modern software construction since it provides automatic tools for software specialization and is based on rigorous semantic foundations. This book is based on a school held at DIKU Copenhagen, Denmark in summer 1998 during which leading researchers summarized the state of the art in partial evaluation. The lectures presented survey the foundations of partial evaluation in a clear and rigorous manner and practically introduce several existing partial evaluators with numerous examples. The second part of the book is devoted to more sophisticated theoretical aspects, advances systems and applications, and highlights open problems and challenges. The book is ideally suited for advanced courses and for self study.
