

# Plastering: An Encyclopaedia

This book provides a thorough introduction to the techniques of modern plastering and a comprehensive treatment of present day fibrous plasterwork. It also includes full technical details of solid work, and thorough coverage of obsolete practices for the purpose of conservation work. It features working drawings in isometric projection to present a three dimensional picture of specific jobs. The third edition has been updated to take account of new materials, changes to British Standards, and the latest health and safety requirements. It will serve as an excellent text for NVQ plastering students, whilst its encyclopaedic structure enables the experienced plasterer to select information quickly on finer points when faced with an unfamiliar task. Architects and surveyors will welcome it as a guide to the scope of the craft and its materials, as a reference for conservation work.
