

Signal and Information Processing for Sonar

This text reviews the signal and information processing theory needed for sonar processing. The fundamentals of detection, localization, and classification are presented.

Signal and Information Processing for Sonar In this paper we present an approach for processing of sonar signals with the a fundamental tool for signal processing and optical information processing. Sonar systems are usually designed for the purposes of detection, classification, localization, and tracking (DCLT) objects under water. DCLT is accomplished **Spatial processing of signals received by platform mounted sonar** In this paper we present an approach for processing of sonar signals with the a fundamental tool for signal processing and optical information processing. **Statistical Methods in Sonar - Google Books Result** Acoustic signals received by platform mounted sonar arrays can be spatially His current research interests include sonar signal and information processing, **On Designing the Transmission and Reception of Multistatic** Our Multi-Sensor Anti-Submarine Warfare group provides knowledge, skills and expertise in sonar signal and information processing, multi-sensor processing **Multimedia Signal Processing: Theory and Applications in Speech, - Google Books Result** Sections.
