**Quetzalcoatlus - Wikipedia** Giant winged Transylvanian predators could have eaten dinosaurs. Whereas birds have fleshy, feather-covered wings, pterosaur wings were formed by a membrane from the body. Order by newest oldest recommendations. Show 25. 25 50 100

**Why a Pterosaur is Not a Dinosaur Science Smithsonian** Pteranodon (/tʰɛrˈnɔːdʌn/ from Greek πτερόν (wing) and ἄδων (toothless) is a genus of pterosaurs which included some of the largest known flying reptiles. By definition, all dinosaurs belong to one of the two groups within Dinosauria, i.e. Theropoda and Ornithomiridae. They were quadrupedal, thanks largely to the discovery of pterosaur trackways.
