

## Perovskite Oxides for Electronic, Energy Conversion and Energy Efficiency Applications. (Ceramic Transactions volume 104)

Focuses on the synthesis and characterization of perovskite oxides such as high-Tc superconductors, ferroelectrics, piezoelectrics, colossal magneto-resistive (CMR) materials, thermoelectrics, ionic conductors, etc. Places particular emphasis on topics that are related to the complex chemistry, anisotropy, microstructure/property relationships, and materials compatibility issues of these materials. The new information and current research provides critical information for researchers and engineers working with perovskite oxides and people involved in electronics.
