

Allowable Stress Design for Reinforced Masonry (SKGA Web Seminar DVD with PDF Handout)

This webinar covers major changes to the allowable stress design provisions from the 2008 to the 2011 MSJC Code. Allowable stress design of flexural elements (beams/lintels and non-load-bearing walls), combined flexural and axial load elements (bearing walls) and in-plane shear (shear walls) are covered. Design procedures and design examples are presented. Speaker Bio: Richard Bennett, Ph.D, P.E. is a Professor of Civil and Environmental Engineering at the University of Tennessee. He is an Associate Editor of The Masonry Society Journal and a Fellow of The Masonry Society. He is a member of ASTM C12 on Mortars and Grouts for Unit Masonry, and ASTM C15 on Manufactured Masonry Units. Dr. Bennett has been very active in the Masonry Standards Joint Committee which writes the Building Code for Masonry Structures. He has chaired the Flexural, Axial Loads, and Shear subcommittee and is currently Vice-Chair of the Main Committee. Dr. Bennett has been appointed chair of the 2016 MSJC Committee.
