

# Handbook of Microstrip Antennas, Volume 2 (Electromagnetics and Radar)

Analysis and design of circular microstrip elements. Microstrip patch antennas. Circular polarisation and bandwidth. Electromagnetically coupled dipoles. Multilayer configurations. Large bandwidth hybrid flat dipoles and arrays. Numerical analysis of microstrip patch antennas. Segmentation and desegmentation methods for microstrip antenna design. Transmission line model of microstrip antennas. Design and technology of low cost printed antennas. Analysis and design considerations of printed array antennas. Circularly polarised array antennas. Microstrip antenna feeds. Advances in substrate technology. Special measurement techniques for printed antennas. CAD of microstrip and triplate systems. Resonant microstrip antenna elements and arrays. Applications of microstrip antennas. Monolithic conical conformal microstrip tracking antenna. Extensions and variations of the microstrip antenna concept. Also available: Handbook of Antenna Design, Vols. 1 & 2 - ISBN 9780863415692 Principles of Planar Near-Field Antenna Measurements - ISBN 9780863417368 The Institution of Engineering and Technology is one of the worlds leading professional societies for the engineering and technology community. The IET publishes more than 100 new titles every year; a rich mix of books, journals and magazines with a back catalogue of more than 350 books in 18 different subject areas including: -Power & Energy -Renewable Energy -Radar, Sonar & Navigation -Electromagnetics -Electrical Measurement -History of Technology -Technology Management
