

Business Process Reengineering with Information Technology at the Marine Corps Basic School

This thesis analyzed the principles and concepts of The Marine Corps Basic School (TBS) at the operational level and the current Information Management Systems used to track the progress of new officers. A web-enabled prototype for TBS was developed to optimize management and decision support for deliberate, time sensitive planning utilized to optimize student performance. The first iteration of the prototype was tested by the TBS Testing Officer. The results of this research revealed potential benefits for student leadership, academic, and tactical tracking. This prototype will be used as a tool for requirements gathering as TBS develops Marine Corps Enterprise Training Information Management System.
