

Transportation Facilities Through Difficult Terrain: Proceedings of the Conference on Transportation Facilities Through Difficult/Aspen-Snowmass/Col

This text contains recent records of transportation facilities constructed through difficult terrain, with emphasis on new technical information and creative problem-solving techniques. The proceedings feature (1) a series of presentations on the Glenwood Canyon project, the final link of the US interstate highway system, which involves many innovative engineering designs to integrate the highway with its breathtaking surroundings; (2) delineation of three recent mega-size projects by respective project managers: the Trans-Tokyo Bay Highway project in Tokyo, Japan, the Euro-Tunnel under the English-Channel, and the Central Artery/Tunnel project in Boston, Massachusetts; and (3) invited papers on challenges and solutions of various transportation facilities constructed around the world in recent years, encompassing such topics as site exploration, planning, roadway design, geotechnical/structural design, construction, rockfall and avalanche mitigation, and environmental challenges.
