

Great Scientists (American Profiles (Facts on File))

Each volume in the American Profiles series provides middle and high school students with concise information on eight to thirteen important and influential figures in a particular field of endeavor. Profiles are organized around a movement, event, or profession that has had a significant, lasting impact on American history and contemporary life. Essential biographical information is included for each figure, but the heart of each profile describes the critical achievements and contributions of the individual under consideration and assesses the subjects significance, not only in the context of the persons own lifetime, but in the broader sweep of American history. Placing each figures achievements and contributions in a historical context makes each profile the ideal source for preparing reports. Students can use this framework as a basis for comparisons and contrasts, which will given them a better understanding of how individuals shape, and are shaped by, the times in which they live. Profiles: Thomas Hunt Morgan; Albert Einstein; Robert Hutchings Goddard; Arthur Holly Compton; Linus Carl Pauling; Enrico Fermi; Robert Oppenheimer; and James Dewey Watson.
