

Windows Server 2008 Networking and Network Access Protection (NAP)

Get the official resource for deploying, administering, and troubleshooting Windows Server 2008 networking and Network Access Protection (NAP) technologies, direct from the experts who know the technologies best. This definitive resource from award-winning Microsoft networking author Joseph Davies and Microsoft Most Valuable Professional (MVP) author Tony Northrup also offers expert insights direct from the Windows Server Networking team at Microsoft. You get detailed information about all major networking and network security services, including the all-new Network Access Protection (NAP), authentication infrastructure, IPv4 and IPv6, remote access, virtual private networks, IP security, quality of service, scalable networking, wireless infrastructure and security, DNS, DHCP, Windows Firewall, and more. You also get a companion DVD with a fully searchable eBook version of the book, plus eBook samples from Understanding IPv6 2nd Edition, Windows Server 2008 TCP/IP Protocols and Services, and TCP/IP Fundamentals. This official Microsoft resource delivers what every Windows administrator needs to master Windows Server 2008 networking. Key Book BenefitsDelivers in-depth technical guidance for administering, Windows Server 2008 networking and NAP technologiesFeatures definitive product information from the experts, with additional insights from the Windows Server team at Microsoft and field consultantsProvides the detailed information that every Windows administrator needs about NAP, IPv4 and IPv6, remote access, virtual private networks, IP security, DNS, DHCP, Windows Firewall, and moreIncludes a DVD with a fully searchable eBook of all seven volumes, plus bonus eBook samples from three additional networking books
